Do you want to sign up new loan applications on the move?

KWIK KADIMA

What is Kwik Kadima:

Kwik Kadima is an Android APP that is an extension of Delter's cloud Credit Management solution called Webfin. Credit providers that use Webfin in their business now have the option to install the Kwik Kadima App on an Android tablet.

Kwik Kadima has a simplified process to allow the user to quickly and seamlessly manage customers and issue new loans without having the Webfin solution.

What are the benefits of Kwik Kadima:

Kwik Kadima is a mobile version of Webfin. Having the App on an android device such as a Tablet, allows the user to go into the field to the customer and assist them with new applications or a total new on-boarding of a new potential customer.

Kwik Kadima can be used as an origination portal A user will load the new application, this will be sent to a central point for review and approval, and once approved the user can payout the loan.

Kwik Kadima can be used as a complete loan creation portal where the operator can manage the loan process, from completing the application, the affordability, credit checks and vetting, and then to the approval and payout.

Requirements:

- *Android based tablet able to run the latest Android version (7" or bigger).*
- *LTE connectivity or faster.*
- *NFC (near field communication) would be beneficial to ensure use with future updates.*
- *Remote access to tablet for installation and query resolution (Awesum etc)*
